

AMENDMENT

Amendments to the Claims

1. (currently amended) An open-network system for ~~managing the~~ automating an architectural process of creating one or more aspects of a contract document comprising:

~~data entry means~~ a graphic user interface for user-selected project-specific features;

at least one attribute information storage means, comprising a database from which a user-selected attribute is identified, each attribute having a unique identifier and data associated with it;

a filter for providing a graphical user interface with filtered data associated with a user-selected attribute;

a user database which stores the unique identifier of the user-selected attribute;

automated selection means for incorporating data associated with the user-selected attribute into at least one aspect of a said contract document; and

a document generation means for creating the aspect of the contract document.

2. (currently amended) An open-network system for ~~managing the~~ automating an architectural process of creating one or more aspects of a contract document comprising:

data entry means for user-selected project-specific attributes;

at least one attribute information storage means, comprising a database from which

the user-selected attribute is identified, each attribute having a unique identifier and data associated with it;

Serial No. 10/085,115

at least one remote attribute information storage means, comprising a database from which the user-selected attribute is identified, each attribute having a unique identifier and data associated with it;

a filter for providing a graphical user interface with filtered data associated with a user-selected attribute;

a user database which stores the unique identifier of the user-selected attribute;

automated selection means for incorporating data associated with the user-selected attribute into at least one aspect of a said contract document; and

generation means for creating the aspect of the contract document.

3. (currently amended) ~~An~~ The open-network system ~~for managing the architectural process as claimed in~~ of claim 2, further comprising means for tracking a project.

4. (currently amended) An open-network system ~~for managing the~~ automating an architectural process of creating one or more aspects of a contract document comprising:

data entry means for user-selected project attributes;

at least one attribute information storage means, comprising a database from which the user-selected attribute is identified, each attribute having a unique identifier and data associated with it;

at least one remote attribute information storage means, comprising a database from which the user-selected attribute is identified, each attribute having a unique identifier and data associated with it;

a filter for providing a graphical user interface with filtered data associated with a user-selected attribute;

Serial No. 10/085,115

a user database which stores the unique identifier of the user-selected attribute;

automated selection means for incorporating data associated with the user-selected attribute into at least one digital file, the digital file comprising data associated with an aspect of a said contract document;

generation means for creating the digital file; and

searching means for querying the user database.

5. (currently amended) ~~An~~ The open-network system ~~for managing the architectural process as in~~ of Claim 4, wherein the digital file created by the generation means comprises ~~Industry-Foundation-Class~~ industry accepted tags.

6. (currently amended) An open-network system ~~for managing the~~ automating an architectural process of creating one or more aspects of a contract document comprising:

data entry means for user-selected project attributes, the data entry means comprising a graphical user interface having text entry and drop-down menu choices;

at least one attribute information storage means, comprising a database from which the user-selected attribute is identified, each attribute having a unique identifier and data associated with it;

a filter for providing the drop-down menu choices of the graphical user interface with filtered data associated with a user-selected attribute;

a user database which stores the unique identifier of the selected attribute;

automated selection means for incorporating data associated with the selected attribute into at least one aspect of a said contract document from the group consisting of architectural

specification, architectural details, architectural schedule or architectural project status;
and

generation means for creating the aspect of the contract document.

7. (new) A method for automating an architectural process of preparing one or more aspects of a contract document comprising architectural drawings, a schedule aspect listing attributes of repetitive building parts to be incorporated into a building, and a specification aspect listing materials and processes selected to construct the building, the method comprising:

maintaining an association between each of a plurality of pieces of selectable design information for a building and a respective data entry location in one or more of the schedule aspect and the specification aspect;

allowing a user to select an attribute for a building;

in response to a user selection of an attribute of a building, retrieving information associated with the selected attribute and graphically displaying a data entry form populated by the filtered associated information by referencing a unique identifier for each attribute and information associated with said respective unique identifier;

storing user selections of each attribute in a user database; and

generating one or more of said aspects of said contract document in one or more of a plurality of formats by accessing the association of the one or more aspects with stored user selected attributes in the user database.

8. (new) The method of claim 7, wherein the data associated with a user selected attribute is associated via the unique identifier with a vector equation, the generating of the document comprising generating a detail aspect based on at least said vector equation associated with said selected attribute.

Serial No. 10/085,115

9. (new) The method of claim 8, further comprising integrating the vector equations into a selected one of a group consisting of a plan view and an elevation view.

10. (new) The method of claim 7, further comprising presenting a human interface for a diagram utility allowing a user to selectively preview and create one or more of said architectural drawings.

11. (new) The method of claim 7, further comprising:

in response to a user selected attribute accessing a manufacturer catalog page through a browser;

allowing the user to select a catalog item from said manufacturer catalog page; and

generating a schedule aspect of the architectural contract containing data associated with the selected catalog item.

12. (new) The method of claim 7 further comprising:

allowing said user to create or edit one or more of the aspects of said contract document using one or more formats from said plurality of formats.

Serial No. 10/085,115

13. (new) The method of claim 7 wherein said plurality for formats are selected from a group of formats consisting of:

- (a) a spreadsheet;
- (b) an Extensible Markup Language (XML);
- (c) a Computer aided design (CAD); and
- (d) word processing.

14. (new) The method of claim 7 wherein allowing said user to edit said specification aspect of said contract document further comprises using a text editor.

15. (new) The method of claim 7 wherein at least one piece of design information from said pieces of selectable design information is stored in a selected one of a group consisting of:

- (a) a schedule database;
- (b) a catalog database;
- (c) a drawing database; and
- (d) a specification database.
